

Method and Architecture for Redundant SS7 Deployment in a Voice Over IP Environment

Abstract of Disclosure

18A method and system for controlling the switching and control operation of at least one of an Softswitch system, an Signal Transfer Points (STP) and a gateway (GW) (e.g., in a SS7 signaling environment). By providing support for redundancy, a second switch system can take over the routing and control operations of a first switch system when the first switch system experiences difficulty. Difficulty may be any one of several forms (e.g., switch crash, congestion, hardware failure).

Approved for Release by NSA on 09-10-2013 pursuant to E.O. 13526
